

*Dear Horse Lover,*

*Does your elbow hurt from sifting? Are you tired when you are done with your stalls? Are you paying too much for bedding only to throw it away? Please allow us to introduce you to The (((Shaker))). If you have 5 or 50 stalls to clean, you need The (((Shaker))). We will be glad to come out and clean some of your stalls as a demo.*

## ***The (((Shaker)))!***

***The latest innovation in stall cleaning***

***Once you shake, you'll never rake!***

The (((Shaker))) is a bedding sifter that separates the manure from the stall shavings. It saves time, as well as bedding and disposal costs. Powered by a simple electric drill, The (((Shaker))) **recycles** the bedding so completely, you'll think it's new. Weighing only about 40 lbs., The (((Shaker))) is smaller than a wheelbarrow, making it easy to maneuver around the barn and in the stalls. Operation is as simple as shoveling the mix into the hopper. Also, the removable Muck Bucket makes emptying the manure a snap.

Made and assembled in the USA
